

Tides/HF round tables recommendations

- Jason-2 EoL time: trade-off between “soon” vs. waiting for Sentinel-3B
 - No unanimous consensus but most people prefer to stay on interleaved orbit as long as possible
- EoL Orbit choice: no recommendation
- Internal tides :
 - promising products have been tested (M2 R. Ray) but still need some time for more tests
 - Use IT correction for AVISO grids
- Gdr tide product:
 - No objection to store the LP ocean+load solution in the ocean_tide_sol_2 field (FES2014)
- Regional modeling: recommend continue to develop regional modeling
- Bathymetry : still need bathymetry data to improve tide models (critical regions are Argentina, Siberian Plateau, Yellow seas ...)
