# The G-POD Sentinel-3 & CryoSat-2 SAR/SARin Processing service

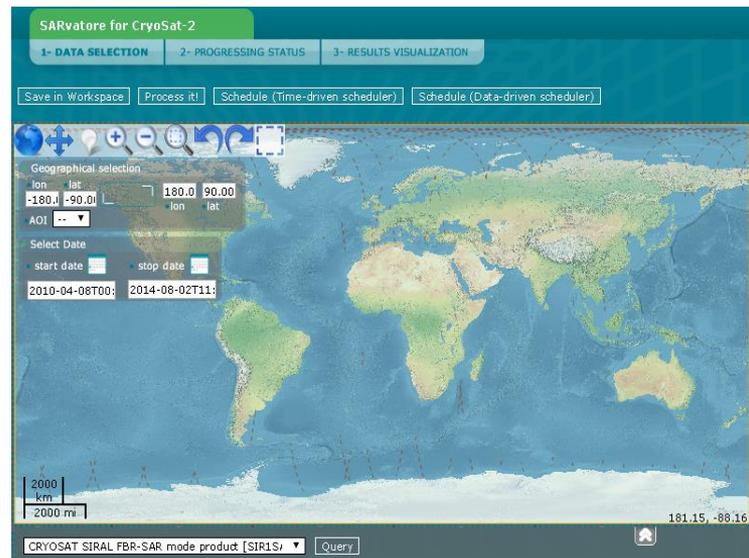

The G-POD Sentinel-3 & CryoSat SAR/SARin Processing service is a web platform that provides the capability to process on line and on demand Sentinel-3 SAR and CryoSat SAR and SARin data, from L1a (FBR) data products until SAR/SARin Level-2 geophysical data products.

The service, coined **SARvatore** (**SAR** Versatile **Altimetric TOolkit** for **R**esearch & **E**xploitation), can process data over any surface.

The service is available at:

- [https://gpod.eo.esa.int/services/CRYOSAT\\_SAR](https://gpod.eo.esa.int/services/CRYOSAT_SAR)
- [https://gpod.eo.esa.int/services/CRYOSAT\\_SARIN](https://gpod.eo.esa.int/services/CRYOSAT_SARIN)
- [https://gpod.eo.esa.int/services/SENTINEL3\\_SAR](https://gpod.eo.esa.int/services/SENTINEL3_SAR)

ESA UNCLASSIFIED - For Official Use

European Space Agency

# The G-POD Sentinel-3 & CryoSat-2 SAR/SARin Processing service

The service is **open, free of charge and accessible on line from everywhere.**

In order to be granted access to the service, you need to have EO-SSO (Earth Observation Single Sign-On) credentials.

For registration, go to **<https://earth.esa.int/web/guest/general-registration>** and afterwards, you need to submit an e-mail to G-POD team (write to **[eo-gpod@esa.int](mailto:eo-gpod@esa.int)**), requesting the activation of the CryoSat-2/Sentinel-3 service for your EO-SSO user account.

The service was made available on 10 June 2014 accumulating now more than **six years** of intense exploitation and usage with many studies now published in peer-reviews journals (full bibliography available).

The GPOD/SARvatore service has 202 Users supported with: 3150033 CPU hours (that's 360 years), 71938 processing tasks completed (since the beginning) and 929.60 TB processed (since the beginning).

# The G-POD Sentinel-3 & CryoSat-2 SAR/SARin Processing service

The processor prototype is versatile, allowing users to customize and to adapt the processing according to their specific requirements by setting a list of configurable options.

Pre-defined processing configurations (**Official CryoSat-2, Official Sentinel-3, Open Ocean, Coastal Zone, Inland Water (20Hz & 80Hz), Ice and Sea-Ice**) are available.

The configurable options are divided according to the processing level they refer to (L1b and L2).

The system allows the user to follow the task status in real time, append to the output product the **SAR/SARIN Echo Waveforms & Range Integrated Power Waveforms**, build **SAR/SARIN Stack Data** and **retrack SAR L1b waveforms** with both SAMOSA retracker optimised for the various applications (**SAMOSA2, SAMOSA3 and SAMOSA+**) and the empirical **ALES+ SAR** retracker.

A **new** retracker (**SAMOSA++**) has been developed and will be made available in the future.

**Processing Parameters**

**Pick Profile:**  
Here you can choose some pre-defined processing configuration: by selecting one menu below, the processing options (recommended for the specific thematic appl then you can go directly to the processing clicking on the "Process it!" button. Select the processing configuration you want to use.

**Here you find a list of processing options that you can select according to the processing level**  
For a wiki user manual of the service, go here: wiki  
For a hands-on presentation, go here: slides

**L1B Processor:**

- **Select the data type NT/ST you want to process**  
Flag to process only ST (Short Time Critical) or only NT (Non Time Critical) or both data types.
- **Data Posting Rate**  
Flag to set the data posting rate: 20 Hz (canonic posting rate) or 80 Hz (fiver posting rate).
- **Hamming Weighting Window**  
Flag to set the application of the Hamming Weighting Window on the burst data (section 4.4 in REF1).
- **Exact Beam-Forming**  
Flag to set the application of exact or approximated Doppler Beam Steering (section 4.4 in REF1).
- **FFT Zero-Padding**  
Flag to repeat the Zero-Padding prior to the range FFT (section 4.8 in REF1). Zero-Padding is indicated for coastal zone analysis.
- **Radar Receiving Window Size**  
Flag to select the size of the radar receiving window: 128 range bins (standard) or 256 range bins (extended). Extended window is indicated for coastal zone analysis.
- **Antenna Pattern Compensation**  
Flag to activate the antenna pattern compensation on the Stack Data.
- **Dump SAR Stack Data in output**  
Flag to dump the SAR Stack Data in the output package. Be aware that SAR Stack Data are bulky data products (around 1 GB for range peak); do not process them massively but limit yourself at around 10/20 passes at the time.

**L2 Processor:**

- **Restrict the re-tracking on specific surfaces**  
Flag to limit the processing on open sea or on water (open sea, coastal zone and inland water) or to process the full pass.
- **PTR width alphap parameter**  
Use a LUT (Look-Up Table) or a constant for PTR (Point Target Response) alphap parameter.
- **SAMOSA Model Generation**  
Flag to select the generation of the SAMOSA model to use in the re-tracking. SAMOSA3 is a truncated version (only zero order term) of SAMOSA2 (REF2). SAMOSA+ is the SAMOSA2 model tailored for inland water, sea ice and coastal zone domain.
- **Dump RIP in output**  
Flag to append Range Integrated Power (RIP) in the output netCDF data product.
- **Dump SAR Echo Waveforms in output**  
Flag to append the SAR Echo Waveforms in the output netCDF data product.
- **Single-look or Multi-look Model**  
Flag to set the application of the Model Multilooking (Single-Look or Multi-Look). Single-Look option is indicated for quick look operations while Multi-Look is the most accurate.

REF1: Guidelines for the SAR (Delay-Doppler) L1B Processing  
REF2: SAR altimeter Backscattered Waveform Model (SAMOSA Model Paper), IEEE-YGARSS, Geoscience and Remote Sensing, IEEE Transactions on (Volume:53, Issue: 2)

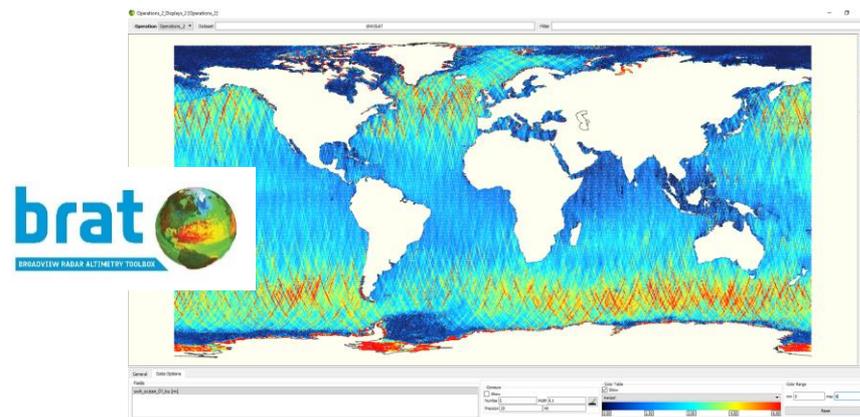

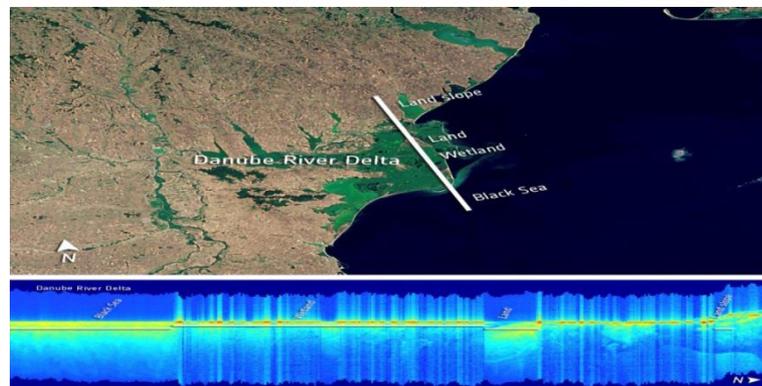

For any question, bugs and support, please contact us at: altimetry.info@esa.int  
For G-POD specific questions, please contact eo-gpod@esa.int

- At the end of the run, the output can be downloaded from the service's portal by way of a simple click or uploaded directly to the user's personal ftp as a tar.gz package. The output package **consists** of

- A pass Ground-Track in KML format.
- A Radar Echogram Picture in PNG format.
- An L2 data product in NetCDF format.

- The output NetCDF file can be ingested in **BRAT (Broadview Radar Altimetry Toolbox)** to browse, visualize, edit and export the output content.

- The toolbox and tutorial are available at [earth.esa.int/brat](http://earth.esa.int/brat)

# Joins & Share SARvatore Forum

- **J/S Forum:** users can get here the last updates & releases and report issues, ask questions, share & discuss results:

[https://wiki.services.eoportal.org/tiki-view\\_forum.php?forumId=105](https://wiki.services.eoportal.org/tiki-view_forum.php?forumId=105)

The screenshot shows the SARvatore forum interface. On the left is a sidebar with navigation links like 'About RSS', 'Contacts', 'Communities', and 'CryoSat'. The main content area displays a forum post titled 'Update of the S3 SARvatore Service to version v1.29' by Salvatore.Dinardo, dated 24-Apr-2018. Below the post is a table with columns for TYPE, TITLE / AUTHOR, REPLIES, READS, LAST POST, and ACTIONS. The table contains two rows of forum entries. On the right side, there are search bars, a 'Register' button, 'EO SSO login', and a list of 'ENVIRONMENTS' including GPOD, CloudToolbox Service, FedEO, OGC Services, and EO Data Gateway.

TYPE	TITLE / AUTHOR	REPLIES	READS	LAST POST	ACTIONS
	Update of the S3 SARvatore Service to version v1.29 Author: Salvatore.Dinardo	1	66	24-Apr-2018 Re: Update of the S3... by Salvatore.Dinardo	
	Update of the S3 SARvatore Service to version v1.28 Author: Salvatore.Dinardo	0	134	05-Apr-2018	

Data Repository: The **SARvatore Data Repository** is now online.

Datasets processed for the users are available to the Altimetry Community at:

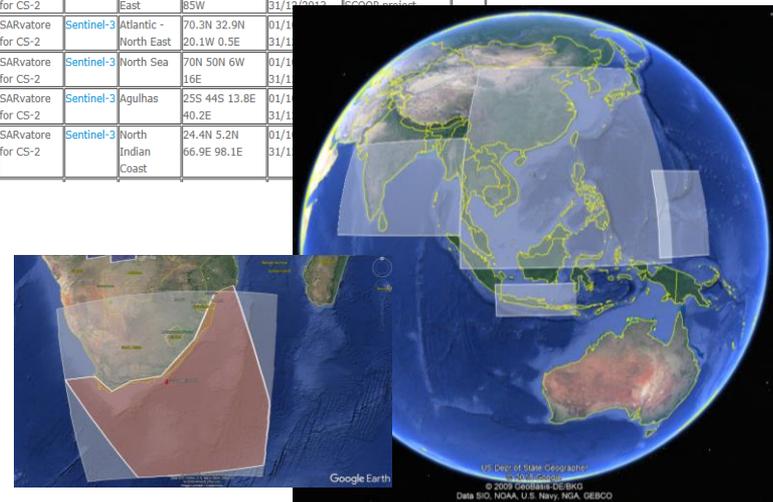

<https://wiki.services.eoportal.org/tiki-index.php?page=SARvatore+Data+Repository&highlight=repository>

- A .kmz file can be downloaded to visualize in Google Earth the processed regions and compare, for example, to the CS-2 geographical mode mask.

## SARVATORE DATA REPOSITORY

This page is a repository of Data processed in G-POD with SARvatore service. Data are available for download.

USER	SERVICE	PROFILE	REGION	COORDINATES	START-STOP TIME	PURPOSE OF THE PROCESSING	DATA
S. Dinaro	SARvatore for S3	Custom	Atlantic - North East	60N 35N 12W 16E	15/06/2016 09/05/2018		0001

New Cluster Element: **CREODIAS**.

The new cluster exploits the cloud computing and cloud storage based on the CREODIAS platform (<https://creodias.eu/>).

In the CREODIAS cluster set-up, all the products get processed in local avoiding time-consuming data transfers.

## CS2 SARvatore & SARinvatore Services

Services updated to process CryoSat-2 Baseline D data which have recently entered in operation.

## CS2/S3 SARvatore & CS2 SARinvatore Services now include:

- Possibility to dump SAR stack in Power and Phase for both the two channels (option from Graphic Interface, available only in the SARinvatore for CS-2 Service).
- Add epoch field and Epoch Reference Gate field in the products.
- Addition of the Leap Second in the products.

## CS2/S3 SARvatore & CS2 SARinvatore Services now include:

- Support to CLS15 Mean Sea Surface in the product
- Support to J2 Sea State Bias Model in the product
- Support to NSIDC Sea Ice Concentration in the product
- Support to NSIDC Sea Ice Age in the product
- Support to FES2014b Tide Model in the product
- Support to TPX09 Tide Model in the product
- Support to DTU18 Mean Sea Surface in the product
- Support to CLS13 Mean Dynamic Topography in the product
- Support to GPCC Precipitation Rate in the product
- Support to distance to land based on GSHHG database

**CS2/S3 SARvatore & CS2 SARinvatore Services** now include:

- New fields in the products GEO\_Corr\_SeaIce and GEO\_Corr\_Land.
- When Waveform is Hamming-weighted, a dedicated LUT is used now.
- Addition of First Guess Epoch and Epoch Bounds in the product.
- Fix of a bug of distance to land field for latitude around +88.
- Support to CryoSat-2 Baseline D FBR/L1b Products.
- A GUI with Relative Orbit Number Filter, Ascending/Descending Filter and Summary Report & a function to compute geodetic distance (dmt).

**CS2/S3 SARvatore Services** now include:

The possibility to post-process the data with the **ALES+ SAR retracker**.

**ALES+ SAR** is a subwaveform retracker for open ocean and coastal zone SAR altimetry data.

**ALES+ SAR L2 NetCDF products** will be placed into a dedicated output folder.

Further information on this algorithm can be found in <http://doi.org/10.5270/esa.BalticSEAL.ATBDV1.1>

**Please check the two other OSTST2020 presentations:**

- The ALES+ SAR Service for Cryosat-2 and Sentinel-3 at ESA GPOD by Passaro et al.
- Investigating SAR Altimetry over the Great Salt Lake – Comparing SAMOSA+/++ and ALES+ SAR by Wenzl et al.

- The ESA-ESRIN R&D Altimetry Team and the ESA GPOD Team support users who want to include their processors in GPOD/SARvatore.
- If interested, please send an email to:

[eo-gpod@esa.int](mailto:eo-gpod@esa.int)

[altimetry.info@esa.int](mailto:altimetry.info@esa.int)

To support the future availability of SARvatore services on the GPOD platform, users are kindly invited to provide feedback on the service to [eo-gpod@esa.int](mailto:eo-gpod@esa.int)
